

## **ICIS – Integrated court information system**

ICIS is a robust and complex information system that covers all aspects of court management. It is utilized by three court levels in R. of Macedonia:

- Supreme court
- Appeal courts
- Basic courts

This information system allows complete fulfillment of Law issued activities in the courts of all levels with maximum quality and total control of the documents that arrive in the court and documents that are created in the court. It ensures optimal electronic communications between the courts of different levels, in order to reduce and eliminate the manual work, and the possible mistakes. Because of its complex functionality, it is divided into more subsystems, all with its own specific destination and performance. All subsystems are created with the same development technology and fit perfectly into the whole of the system. Those subsystems are:

- CASE management subsystems
- *Document management subsystem*
- Internal court communication subsystem
- *Inter court communication subsystem*
- *Reports subsystem*
- Temporal and space planning subsystem
- Notification and events reaction subsystem
- Search subsystem
- System administration subsystem
- HELP subsystem
- Statistic subsystem

### *SW developing platform*

- Borland DELPHI
- FastReport , WP Tools
- MS – Windows 2000 Server / Windows 2000 Pro.
- MS – SQL Server

### *End users*

- Basic court Skopje 1
- Appeal court Skopje
- Supreme court of R. Of Macedonia
