

Information System of INSPECTORATE OF LABOUR of R. Macedonia

This Project accomplishes a complete automation of the work of the Inspectorate of Labor in the Central Location in the Republic Inspectorate of Labor and 34 Municipal Offices in the Republic.

The Project provides modernization of all operations, automation and standardization of the procedures, standardization of the documents generated in the Inspectorate of Labor, an opportunity for control during the flow and status of the procedure and preparing different reports.

All data in the Municipal Offices are in the local ACCESS databases and then they are replicated on the central level in the main database MS-SQL Server. The main database gives all required information for the work of the inspectors in the Municipal offices.

It also solves the complete communication on the internal level, the Republic Inspectorate of Labor with the Municipal offices and external communication via Internet.
