

## **MCMS - Misdemeanor Case Management System**

The main goal of this Project is support of the case processing steps of misdemeanor procedure, eliminating redundant tasks, automating routine tasks, and simplifying complex and time-consuming procedures, that includes:

- Case history ( register of events )
- Scheduling
- Online Inquiry
- Document generation & distribution
- Time and action dependencies
- Information Management System
- Reporting and Printing
- Database management

It has following features:

- Entry and record of all relevant elements, actions and events in all case processing steps of the misdemeanor procedure;
- Collecting all the relevant case, parties, charge, disposition, sentence, warrant, calendar, minutes for use in misdemeanor arrangements of all types;
- Dealing with all possible outcomes of an arrangement: guilty/not-guilty plea, change of plea, continuance, court warrant and dismissal;
- Response to all rules based and time-limited actions with reaction when these actions occur;
- Generates all documentation and reports generated throughout the misdemeanor procedure;
- Generates the minute entry, warrants, orders and other sentencing forms , with the option of adding notes in a word-processing environment;
- Maintenance of all charge information historically, including original charges, amended charges and final charges at disposition;
- Search using complex Boolean logic, according to relevant elements;
- On line case inquiry to resolve court requests and questions with regard to time and process critical operations;
- Management of case correspondence;
- Management Information System that generates statistical reports with meaningful data that allows the main aspects of court operations to be monitored and managed more effectively on a local and central level.
