

## **Information System for Department of Labour and Employment in Kosovo**

The project is implemented for the needs of Department of Labor and Employment at the Ministry of Labor in Kosovo including development, design, programming and implementation of a Database which contains the following functions:

- Registration of job applicants in 7 Regional Employment Centers and Municipality employment offices
- Registration of vacancies
- Registration of all data for trainees in the Centers for Professional Training
- Employment mediation, filling vacancies with job applicants according to employer criterions
- Generate different periodical statistic reports by different categories, data analysis and printing different forms connected with job applicants, etc.

Utilizing the developed ASP.NET WEB application improves the quality of employment institutions' services offered to employers, gives effective information and exact and precise management information. It gives a real statement of unemployment, employment and training of job applicants in Kosovo.

Also, there are conditions for employers to have an easier way of giving applications for filling vacancies and eliminates manual way of collecting information.
